MÜPRO

Floor construction

WORKING FLOOR SYSTEM: MODULAR AND QUICK TO INSTALL

The solution for elevated areas without hot work

MÜPRO's modular floor construction system offers a cost-effective solution with short installation times and a high degree of flexibility. By using high-speed welding (stud welding), the system components can be attached to the ship's structure quickly, reliably and with minimal effort.

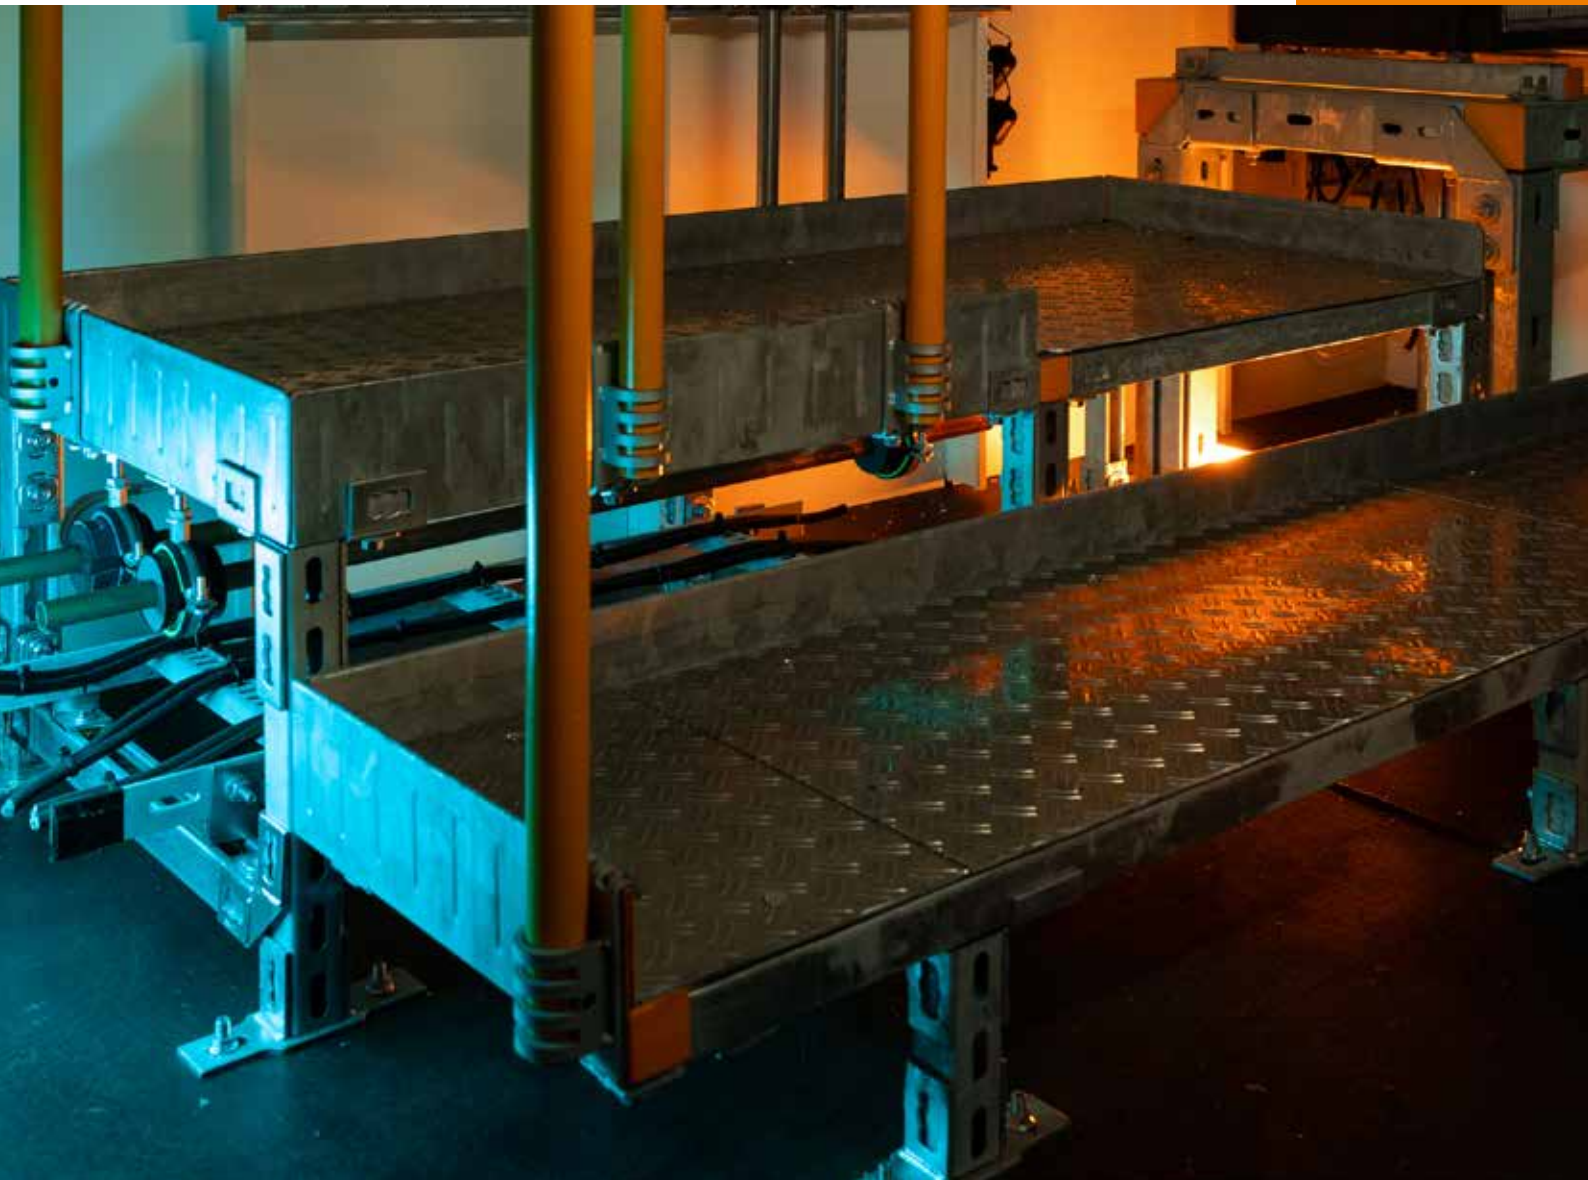

- **Modular system:** Proven system with a rail system specially developed for this application.
- **Pre-coating:** All components are pre-coated, so that subsequent painting work on the construction is not necessary.

- **High flexibility:**

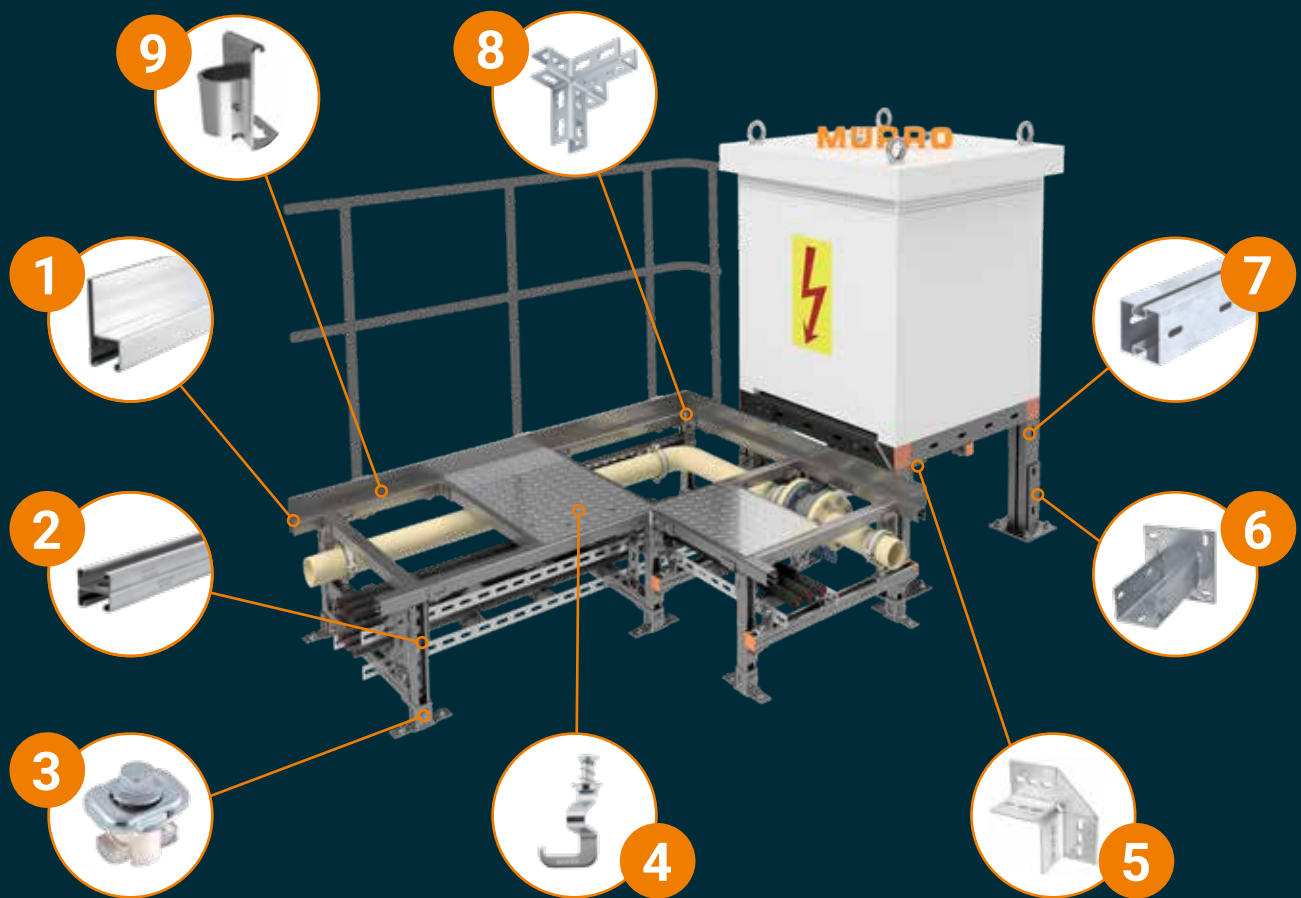

- Quick and easy to assemble during construction.
- Expandable at any time during construction and modifiable during conversions.
- Can be reused after dismantling.

- **Quality:** Our support channel system is certified.

- Fixing pipework and cable trays directly to the floor structure.

Installation of a floor structure using MÜPRO components

- 1 MPR-Support channel, 41/41/2.5 w. coaming edge
- 2 MPR-Support channel, 41/42/2.0, H-profile
- 3 MPR-Connection lock type S+ BV
- 4 Floor plates quick fastener 41/41
- 5 MPT-Angle connectors 90°
- 6 MPT-Saddle supports for Q80
- 7 MPT-Support profile Q80 with 2 slots
- 8 MPR-3D-Connectors type S+
- 9 Handrail support MPR type S+ for pipes

MÜPRO Maritim, headquartered in Hamburg, is an international manufacturing and trading company specialising in support systems for solving almost all fastening tasks in the shipbuilding industry. In addition to our products tailored to the needs of the shipbuilding industry, we offer a range of variable products, which you can order in modified versions to meet your requirements.

Our systems are designed specifically for maritime applications and meet the highest standards in terms of corrosion resistance, vibration control and maritime standards and approvals.

Our fastening systems are used in a wide variety of ship types and maritime applications, including cruise ships and ferries, mega yachts, naval vessels, offshore units, as well as specialised and cargo ships.

Our company's services include in-house development and manufacturing, intelligent logistics solutions, practical application engineering and bespoke project support. We support our customers from the initial design right through to the finished fastening solution.
